	Examiner Kenneth S KIM	Art Unit 2111	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

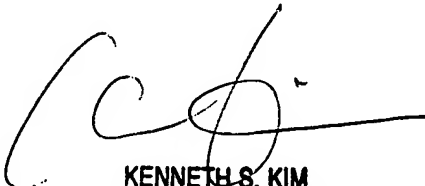

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 2111

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on *March 7, 2005* has been entered.

1. Claims 1-7 are presented for examination.

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 3-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

(a) Claim 3, the context of calculating address is not clear. The relationship with any other limitation is not clear.

(b) Claims 3 and 5, "the further command" lacks antecedent basis.

(c) Claims 4, 6, and 7, "the further processors" lacks antecedent basis.

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Art Unit: 2111

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1-7 are rejected under 35 U.S.C. 102(e) as being anticipated by Matsuo, U.S. Patent No. 6,484,253, cited in the previous office action.

Matsuo teaches the invention as claimed in claim 1 including a data processing method using a multiplicity of processors (fig. 54; corresponding to 929, 930, 931, and 932) which operate in parallel (col. 48, line 5) and to which a respective command for data processing is supplied simultaneously, at least one of the processors being alternatively supplied with a condition command (col. 48, lines 14 and 18), the supplying of the condition command conditioning (col. 48, lines 18-23) the parallel execution of all of the commands for data processing, and

further teaches as in claims 2-7,

(a) wherein the supplying of the condition command has the effect that the computation result of one of the processors is not written back into a target register (col. 49, line 6) – claim 2,

(b) wherein the supplying of the condition command has the effect that an address is not computed (any type of arithmetic computation) – claim 3,

Art Unit: 2111

(c) wherein the supplying of the condition command has the effect that a command is not executed by at least one of the further processors (col. 49, line 20) – claim 4

(d) wherein the further command comprises arithmetic computation command or move command (any type of commands) – claim 5,

(e) wherein the condition which is associated with the condition command is the same or different for all the further processors (can be any combination; col. 49, lines 20 and 25) – claims 6 and 7.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

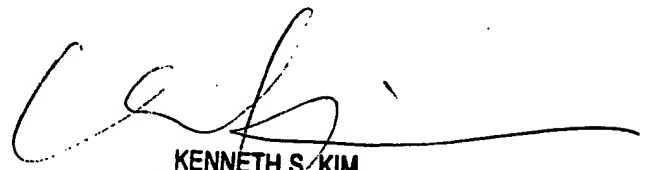

Minagawa et al taught a method of aborting instructions executed in parallel.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kenneth S KIM whose telephone number is (571) 272-3627. The examiner can normally be reached on M-F (8:30-17:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mark Rinehart can be reached on (571) 272-3632.
